Comparison Chart of Geometries Designations

Method Number	METHOD 1	METHOD 2**	METHOD 3	METHOD 4
Designation	Traditional CIE Convention	Aspecular angle	New Proposal	New Proposal Protractor method
Illuminator Geometry	Anormal Illuminators	(Single) Anormal Illuminator	Anormal Illuminators	Protractor Illuminators
Viewer Geometry	Anormal Viewing	Aspecular Viewing	Aspecular Viewing	Protractor Viewing
Standard	E 2175	E 2194	-	-
<i>Classical metallic geometries (ASTM E 2194, DIN 6175-2)- 1st Generation Gonioapparent</i>	45°:-30°	15°	45°:as 15°	P45°:120°
	45°:-20°	25°	45°:as 25°	P45°:110°
	45°:0°	45°	45°:as 45°	P45°:90°
	45°:30°	75°	45°:as 75°	P45°:60°
	45°:65°*	110°	45°:as 110°	P45°:25°*
<i>New interference geometries (under discussion)-2nd Generation Gonioapparent</i>	15°: 0°	15°	15°:as 15°	P75°:90°
	15°:-30°	-15°	15°:as -15°	P75°:120°
	45°:-60°	-15°	45°:as -15°	P45°:150°
	65°*:-50°	15°	65°:as 15°	P25°*:140°
	* 65°:as15° illumination is in conflict with 45°:as110° viewing direction			
** The notation for this method does not accommodate multiple illuminators/multiple viewers				

New ASTM International Standard Covers Latest Wave of Gonioapparent Colorants

First generation gonioapparent colorants are materials pigmented with metal flakes that change lightness as illumination angles change. Used heavily in automotive coatings, the first generation of gonioapparent materials was covered by ASTM International standard [E2194](#), Practice for Multiangle Color Measurement of Metal Flake Pigmented Materials, first published in 2003.

Now, a second generation of gonioapparent colorants that change color with varying illumination and viewing angles has led to the development of a new standard, [E2539](#), Practice for Multiangle Color Measurement of Interference Pigments.

Both ASTM E2194 and E2539 are under the jurisdiction of Subcommittee E12.12 on Gonioapparent Color, part of ASTM International Committee [E12](#) on Color and Appearance.

Multi-Angle Color Measurement and Flake Characterization

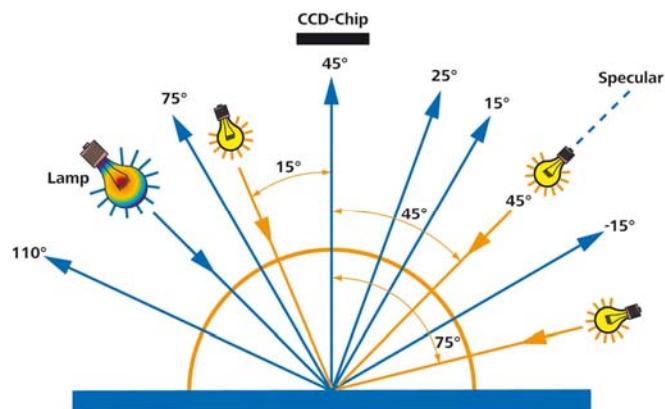

Multi-angle Color Measurement BYK-mac

- Illumination: 45°
- Detection: 6-angles
-15°, 15°, 25°, 45°, 75°, 110°

Sparkle Characterization

- Direct illumination: 15°, 75°, 45° from perpendicular
- Camera detection: 0°

Graininess Characterization

- Diffused illumination
- Camera detection: 0°

G. Kiegle-Boeckler, ECS 2007 Nürnberg, Total Color Measurement of Effect Finishes

Visual Effect - Evaluation

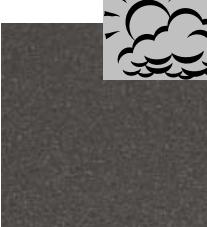

Appearance of effect finishes depends on illumination conditions:

Sunny sky: Direct illumination

- Color starts to sparkle

Cloudy sky: Diffused illumination

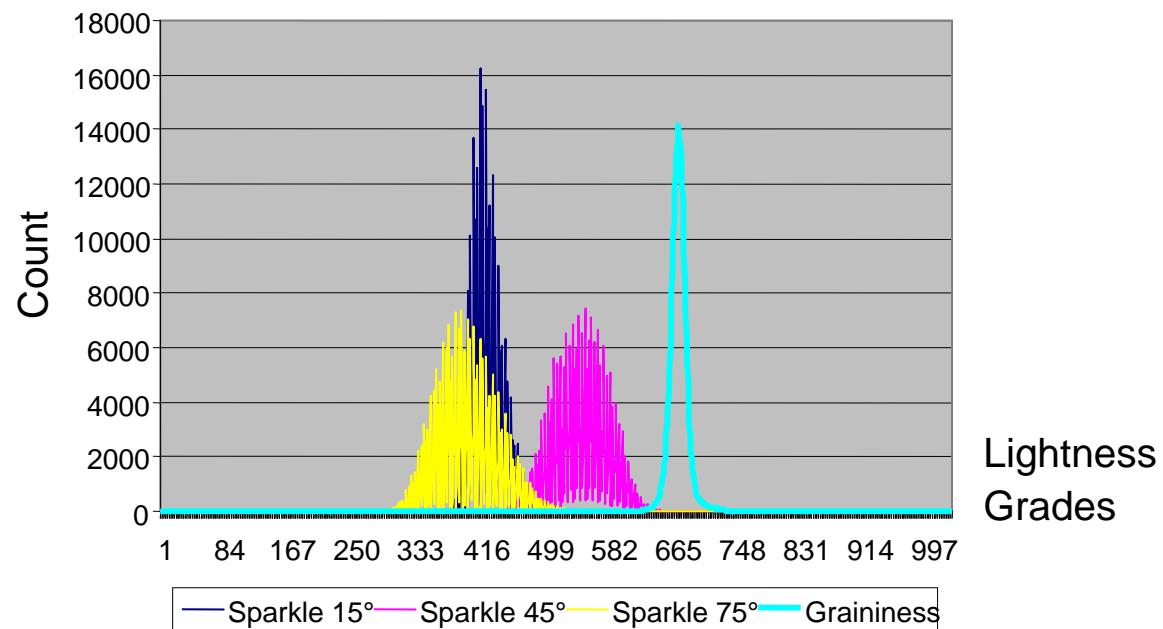

- Fine versus grainy pattern
